

# Animal Shelter Website

## Description:

You are building a website which will serve as a marketplace to connect people who want to either adopt a pet or give away a pet.

Figma Design Link (Variant 1): <https://www.figma.com/file/y6nsHO6aZ5tO38AOfxLR3A/Animal-Shelter?node-id=0%3A1>

## Requirements:

1. We need to design a homepage with following sections:
  - a. Layout:
    - i. Header
    - ii. Footer
  - b. Main Section:
    - i. A Section for people who are interested in adoption. When they click on adopt button, they should be able to see "Adopt A Pet" form. And also, a button to show all the available pets for adoption.
    - ii. A section for people who are interested in giving away a pet. When they click on "Give Away", we should show a Give Away form.
2. Adopt A Pet form:
  - a. They need to fill the questionnaire and also provide us with their personal details.
  - b. These personal details need to be validated.
  - c. When they click on "Request for Adoption" button, please save the details in local indexed DB.
3. Give A Pet away form:
  - a. They need to fill the questionnaire and also provide us with their personal details.
  - b. These personal details need to be validated.
  - c. When they click on "Request for Give Away" button, please save the details in local indexed DB.
4. What all pets do we have?
  - a. When they click on this button, we need to show the list of available pets.
  - b. Show the following Name, Breed and Age.
  - c. Initially you can create a list of 10 dogs and 10 cats. (You can either create in a json file, or you can use indexedDB to seed the initial data)
